Education

University of California, Berkeley Berkeley, CA

M.S. Electrical Engineering and Computer Science (EECS), 4.0 GPA *Aug 2025 – May 2026*

- **Research focus:** CS education, advised by Professor Lisa Yan
- **Notable coursework:** Advanced NLP, Human-AI Interaction, Designing CS Education, User Interface Design & Development, CS Education at Scale, Educational Data Mining, Educational Data Analysis

University of California, Berkeley Berkeley, CA

B.S. Electrical Engineering and Computer Science (EECS), 3.9 GPA, Graduated with honors *Aug 2021 – May 2025*

- **Notable coursework:** Operating Systems, Computer Networks, Building User-Centered Programming Tools, Computational Photography & Computer Vision, Research in AI Education, Computational Genomics, Machine Learning, Databases, Artificial Intelligence, Linux System Administration, Efficient Algorithms & Intractable Problems, Computer Security
- **Member of IEEE-HKN** (Eta Kappa Nu), Mu Chapter (EECS Honor Society)

Experience

Databricks | Software Engineer | Sunnyvale, CA Sep 2026 – Present

- Code and Continuous Integration team

UC Berkeley | Lecturer, CS 61A | Berkeley, CA Jun 2026 – Aug 2026

- Delivered lectures, supervised a 20-person course staff, oversaw the introduction of weekly quizzes using the computer-based testing facility at UC Berkeley, hosted office hours, and wrote exam questions for CS 61A: The Structure and Interpretations of Computer Programs

UC Berkeley | Head Graduate Student Instructor, DATA 188 | Berkeley, CA Jan 2026 – May 2026

- Taught discussion sections, developed discussion worksheets, and hosted office hours for DATA 188: Introduction to Deep Learning

Databricks | Software Engineer Intern | Mountain View, CA May 2025 – Aug 2025

- Implemented an extensible and configurable system to automatically remediate failed continuous integration (CI) jobs, saving 120+ engineer hours/month
- Migrated source of truth for CI checker results from GitHub to an internal RPC service, reducing Databricks' dependency on 3rd party APIs and halving request latency

Stripe | Software Engineer Intern | South San Francisco, CA May 2024 – Aug 2024

- Saved 38+ engineer hours weekly by creating a heuristic to prioritize tests run in continuous integration builds for the largest Ruby codebase in the world (20+ million lines of code and 3+ million tests)
- Created dashboard to evaluate effectiveness of different test ordering heuristics

Bloomberg | Software Engineer Intern | New York, NY May 2023 – Aug 2023

- Created an internal Node.js package which retrieves data from GraphQL APIs to aid in migration of Bloomberg's Customer Service Center (CSC) portal to new infrastructure
- Created full stack web subapp for clients to submit and view Bloomberg Valuation (BVAL) Price Challenge tickets in the CSC portal using TypeScript, React, and Express.js
- Reduced maintenance costs by creating the first CSC subapp that uses Bloomberg's internal managed infrastructure and significantly reduced back-and-forth between customer service representatives and clients by adding advanced input validation

Bloomberg | Software Engineer Intern | New York, NY May 2022 – Aug 2022

- Integrated a new authorization service, Bloomberg Law's (BLAW) Draft Analyzer API, and the core BLAW Ruby on Rails codebase, speeding up BLAW engineers' development process by eliminating the need for apps to go through the core BLAW codebase to check if a user is authorized to hit a certain API endpoint

Skills

Programming Languages: Python, Java, Ruby, TypeScript, JavaScript, Golang, Scala, SQL, C, Scheme
Technologies: Git, GitHub, NumPy, Pandas, React, HTML, CSS, Ruby on Rails, MongoDB, GraphQL, Node.js, Express, Jest, JUnit, Pytest, OpenAPI (Swagger), continuous integration, Caddy, Redis, Jenkins
Other: Technical documentation, Jira, Agile, Computer Science Education
